

Vegetative Bermudagrass

.....

# The Story of IronCutter

Taliaferro, Literally.

A unique bermudagrass like IronCutter should have a great backstory. An elite, tough variety selection isolated off the rugged plains of Enid, Oklahoma by Dr. Charles Taliaferro, IronCutter evokes hardy, resilient ideals, and it also makes up the very meaning of his family's name.

***The anglicized Taliaferro comes from the Italian family name Tagliaferro, literally translated as "IronCutter".***

So why did we name our vegetative variety after Dr. Taliaferro? We did it as a sign of respect for all of his vast accomplishments in plant breeding. An homage. He's one of our most important figures in plant breeding. Some highlights:

***Post-Doctorate work for the USDA-ARS in Tifton, GA under Dr. Glenn Burton. We know of no one else currently active in turfgrass breeding that can trace such a lineage.***

***Breeder of the 1st seeded bermudagrass, Guymon, in large part with USGA funding.***

***Breeder of the 1st cold-tolerant seeded forage type bermudagrass, Wrangler.***

***Breeder of seeded bermudagrasses Yukon, Riviera, Monaco, and Rio.***

***Breeder of vegetative bermudagrasses Patriot, Latitude36, and Northbridge.***

These efforts encompassed a lifetime of field knowledge and science, and led to the discovery of IronCutter as a promising cultivar in 2007. IronCutter was subsequently trialed, then entered into the 2013 NTEP, performing exceptionally in all turf categories. IronCutter is very widely adapted across the broadest limits of Northern AND Southern bermudagrass growing zones, specifically across a wide range of rainfall locations.

With elite Spring Greenup scores, it displays excellent sod density, and retains its vibrant green color, persisting with elite turf quality in trials where the competition can't cut through. IronCutter is the newest, best choice for cold-tolerant vegetative bermudagrass, and available for use on golf courses, playing fields, parks and residential lawns.

## We Invite You To Discover More...

IronCutter is available for immediate license and use by prospective sod farms, warm-season researchers, and discerning end users, exclusively from Mountain View.
